Work Experience

Plug-Zone

2023 Now

As a Cybersecurity IT Consultant specializing in Identity Management (IDM), I excel in managing Identity and Access Management (IAM) technologies, particularly in NetIQ IDM solutions. With extensive experience in API REST connectors, I seamlessly integrate IAM systems with client environments. Additionally, I leverage my expertise in Linux, alongside fundamental networking and

Courses

Skills and technologies

Technology

Python - intermediate

Experienced Python developer with a focus on backend development and cybersecurity.

Proficient in utilizing libraries for efficient code implementation and adept at integrating Python with other technologies seamlessly. Skilled in crafting robust solutions to tackle cybersecurity challenges, leveraging intermediate-level Python expertise.

Git / Github - intermediate

I have an intermediate level working with this technology. Git is a widely used version control system for software development, while GitHub is a Git repository hosting platform. I know the basics of Git and can perform operations such as cloning repositories, creating branches, merging changes, and collaborating on projects using GitHub.

Proficiency in Development and Networking Technologies

Postman & API Development: - intermediate

ICE Certification of Cambridge University	Demonstrate intermediate proficiency in Postman, a collaboration platform for API development, enabling the creation, testing, and documentation of APIs. Skilled in sending HTTP requests, analyzing responses, and performing API testing and debugging.
Certificado UTN en Technologia MS PowerPoint Nivel Avanzado	
Analista junior en ciberseguridad CISCO	Employ knowledge of Docker, a leading containerization technology, for efficient deployment and management of applications. Proficient in creating and managing containers to streamline development workflows.
Networking academy python ofensivo Udemy	

Docker & Containerization: - basic

Employ knowledge of Docker, a leading containerization technology, for efficient deployment and management of applications. Proficient in creating and managing containers to streamline development workflows.

Figma & Collaborative Design: - basic

Utilize Figma, a popular design and prototyping tool, for collaborative design projects. Competent in creating wireframes, prototypes, and design assets to facilitate team collaboration and product development.

Linux & Bash Scripting: - intermediate

Comfortable working with Linux environments for development and system administration tasks. Proficient in Bash scripting for automating tasks and enhancing productivity in Linux-based systems.

Additional Skills:

- MongoDB & SQL: Familiarity with both NoSQL and SQL databases for data storage and retrieval.
- SQL Injection: Awareness of common vulnerabilities and techniques to mitigate

SQL injection attacks.

- Django: Familiarity with Django framework for rapid development of web applications.
- Artificial Intelligence (AI): Basic understanding of AI concepts and applications in software development.
- APIs: Knowledge of integrating with various APIs to enhance functionality and data exchange in applications.
