PROFESSIONAL SUMMARY

Cybersecurity professional with 3 years of hands-on experience in Identity and Access Management consulting, combined with a focused orientation toward Blue Team operations, digital forensics, and malware analysis. Proven track record applying ISO/IEC 27001 and NIST CSF frameworks in real enterprise environments, with strong foundations in Linux, scripting, and security tooling. Self-driven learner with a technical background built from the ground up — from Python at age 8 to active practice on Hack The Box and CyberDefenders.

WORK EXPERIENCE

Plug-Zone 2023 – Present

Identity Manager Consultant – Account Manager

Leads a technical team responsible for cybersecurity consulting across enterprise clients, overseeing incident analysis, vulnerability management in supervised infrastructure, and compliance-driven security operations. Day-to-day responsibilities include task delegation, technical documentation, and service quality oversight under ISO 9001 standards. Directly involved in compliance engagements applying NIST CSF, ISO/IEC 27001, and CIS Controls — conducting gap assessments, defining control frameworks, and delivering audit-ready documentation. Also handles SIEM-based monitoring with Splunk and Wazuh, firewall policy management, SoD enforcement, and access recertification campaigns. Additionally architected a full identity centralization project for a ~20,000-user organization, providing deep familiarity with enterprise infrastructure and its exposure to identity-based attacks.

AREAS OF EXPERTISE

IAM & Identity Governance

Hands-on experience designing and implementing automated identity lifecycle workflows using NetIQ Identity Manager — from intake forms built in JavaScript through to automated provisioning across Active Directory, Azure AD, corporate email, SAP, Salesforce, and other enterprise applications. Developed connectors and integrations using REST APIs, LDAP, SQL databases, and vendor-specific protocols to bridge identity platforms with heterogeneous client environments. On the governance side, involved in role and permission design, access recertification campaigns, identity revalidation processes, and Segregation of Duties (SoD) enforcement aligned with regulatory frameworks. Applied Zero Trust principles to access policy design, ensuring least-privilege and continuous verification across enterprise environments.

Compliance & Normative Auditing

Experience delivering compliance-oriented security consulting directly to enterprise clients, working against frameworks including NIST CSF, ISO/IEC 27001, and CIS Controls. Engagements include gap assessments, security control recommendations, protocol design, and technical documentation production. Involved in the full cycle — from identifying exposure and mapping findings to applicable controls, through to supporting remediation and producing audit-ready deliverables. Also participates in the design and development of new security solutions built from the ground up on these normative principles.

EDUCATION

Universidad FASTA 2025 – Present

Licenciatura en Ciberseguridad (Cybersecurity – B.Sc.)

Universidad Tecnológica Nacional (UTN) 2023 – 2024

Ingeniería en Sistemas de Información
